

Access to the Event

The Mobile Climbing Wall is mounted on a hydraulic trailer and towed by a pick up truck; access to the site is the responsibility of the Client.

Specifications:

Trailer Weight: 1.5 tonnes Length: 8.5m Width: 2.5m
Vehicle Weight: 2.75 tonnes Length: 5m Width: 1.75m
Total length: 13.5 metres

Access through gates/entrances must allow adequate width and have a wide enough turning into the access from the road.

Sitting Equipment for the Event

The site required needs to be a minimum of 9 metres by 9 metres.

The Mobile Climbing Wall can be erected on either grass or hard standing if it is within the level parameters.

Level Parameters: Level from left to right maximum drop of 7.5cm over 2m lengths

Level from back to front maximum drop of 7.5cm over 1m lengths

There must be no overhead obstructions.

Weather Requirements

The Climbing Wall will be operational in winds up to 30 mph and/or light rain, heavy rain makes the wall too slippery to climb on. If the winds are strong we may need to face the wall into the wind as it is curved and will be affected less this way.

Crowd Control

As described in the previous section the crowd/queue must be managed by the client. The Climbing Wall comes equipped with hard crowd control barriers.

Site Security

After delivery of the Climbing Wall to the site of the Event the Client is responsible for all security. If the Climbing Wall is to be left over night there must be adequate supervision provided, any Health and Safety issues arising while the Climbing Wall is unattended by the Company are the responsibility of the Client.
